

FREEZING COLD CONSERVATORY?

Choosing the correct heating will allow you to use your conservatory all year round giving you an extra room without costing you fortune in energy costs.

Convection Heating in Conservatories

Convection heaters heat air, this air raises, heats your ceiling area then cools and falls into the living area. In conservatories this problem is increased considerably as it has a high ceiling and is predominantly made of glass, and although modern glazing is good at keeping heat in it is prone to not keeping cold out! Whenever you touch your glazing it will be cold.

As this warm air is released from the heater on its upward journey it has to pass large amounts of cold glass, this in turn cools the air much quicker and whatever warm air is remaining is quickly cooled by the cold roof. In order to counteract this heating is on for longer costing you more money and with very little extra gain.

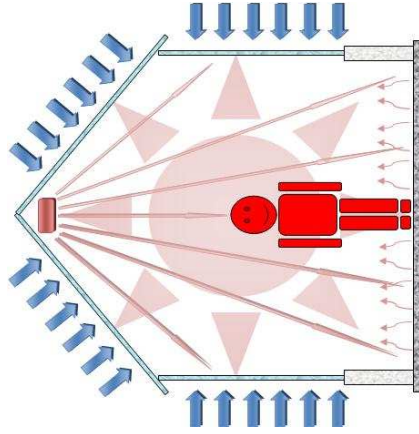

InfraRay Heating in Conservatories

InfraRay heaters literally bathe you in soothing, warm infrared rays. As infrared doesn't rely on heating the air it excludes all the problems of convection heating.

Our heaters are positioned in the apex of the roof allowing for the maximum spread of heat and are so powerful that customers have commented that even their floors become nice and warm.

InfraRay heaters give you a room that you can use all year round with minimal running costs. Easily operated by either simply plugging in or by fully thermostatically controlling the choice is yours.

For more details see our website.

InfraRay Heaters offer you maximum heat with minimal running costs. Contact us in order to establish what your conservatory needs to become another everyday room in your house.

No Pressure Guaranteed.

InfraRay Heaters aren't just a purchase—They're an investment. (It's a lifetime investment as you can easily take it with you if you move house)

If the lack of floor and wall space is a problem when it comes to heating why not consider heating from above? Every conservatory actually has a large amount of wasted space within the roof; InfraRay heaters are ceiling mounted bathing you and the room in glorious Far Infrared.

So much more than a Sunroom

Sitting Room
Dining Room
Office
Playroom

Just somewhere for Peace & Quiet

Use your conservatory to its full potential

All InfraRay Heaters are fully guaranteed for 3 years

About Infrared:

Since the creation of the solar system, Mother Nature chose far infrared (FIR) as the most efficient method of supplying heat and supporting life on earth. Far Infrared light is totally different to Ultra Violet Light and is completely safe; in fact, so attuned are we to its goodness the human body is actually designed to absorb as much far infrared as possible and its benefits have had proven medical use for decades. See our website for more details.
