

Infra-RCP – Radiant Ceiling Panels for Suspended Ceilings

- Providing a sophisticated noise and draught free means of heating commercial premises.
- Low Running Costs
- Extra safety as personnel have no access to heaters
- Mounted with the suspended ceiling allowing flexible use of floor and wall space and does not interfere with activities

Typical Applications

Designed for most places with suspended ceilings

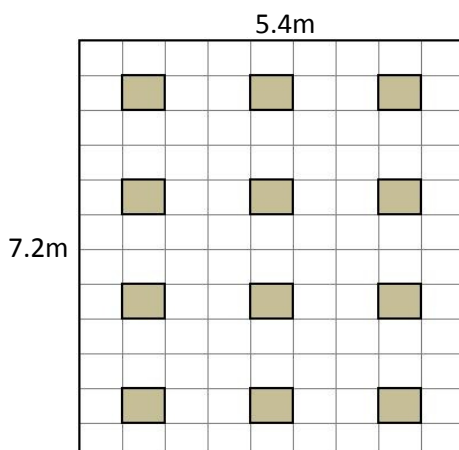

- Offices
- Trade Counters
- Care Homes
- Meeting Room

Features Common to all Models

- Specifically designed for quick and easy installation into suspended ceilings
- Attractive white finish
- Fully enclosed steel case conforming to IP44
- Integral insulation layer ensures that the radiant energy is directed into the room

Selection and Installation

Heaters should be positioned so that the space between the heaters is no greater than the distance between the heaters and the floor. InfraTile should be seen as an economic alternative to space heating systems, they are not ideally suited to 'spot heating' applications although they can provide a localised temperature boost within a larger space perhaps over a work station; however for larger areas our InfraRay system should be considered.

Temperature Control

Controlling your office heating simple with our range of thermostats units, all of which offer both temperature and timer functions.
