'Cool-Touch' Pew Heating

Our revolutionary new discreet pew heating system will allow your congregation to be warm with minimal running costs that are literally based on a per person basis and won't alter the overall appearance of your churches interior.

Our Pew heating system directly heats the people meaning every penny of energy is used efficiently and effectively. As our Pew heaters are very efficient they only need to be operated several minutes before the congregation arrive to ensure a warm welcome.

Each pew is operated independently so Running Costs are kept to an absolute minimum, you could even say on a "Pay per Pew" basis making it easy to calculate and budget your heating costs.

'Cool-Touch' Technology

Our pew heaters incorporate the very latest 'Cool-Touch' Technology which guards from direct contact with the main heater surface but still allows all of the heat to be transferred.

The 'Cool-Touch' gauze is incredibly durable and conforms to the latest fire resistant standards.

Each pew heater has an external framing system in which the 'Cool-Touch' gauze is incorporated, in the unlikely event should the gauze or frame get damaged we can simply replace to outer framing and not the entire heater.

Specification Table

Heater Size	Power Usage @ 230v	Running Costs @16p kWh	Mounting		Cool-Touch Technology
			Floor	Pew	
900mm x 350mm	250	4.0p per Hr.	Yes	Yes	Standard
1200mm x 350mm	320	5.1p per Hr.	Yes	Yes	Standard

Design your own Heaters

To ensure that your pew heating system blends effortlessly into the surroundings we give you various options regarding external framing system. You are able to choose the colouring of the surround, the type of beading used and the colour of the Cool-Touch Gauze (Black, Grey or White Only) and of course the colour of the actual heater itself either in Black or White.

Take Control of Your Heating System

Our pew heating system offers incredible control ensuring you only use the heaters that are needed and as this is the most versatile pew heating system on the market you can choose the best option of control that best suits your church.

- Individual Heaters (Split Pews)
- Individual Pews
- Rows or Columns of Pews
- Zones of Pews

All of the above options are simply operated by the click of a switch or with optional timer units.

Incredibly Low Running Costs

Empty Church	As we aim to heat the congregation the heating system is not operational when the building is empty. Running Cost: £ 0.00
Sunday Service	As you are able to only heat the pew in use heating costs are kept to an absolute minimum. 5 Pews seating 30 people 10 Heaters – 2 per Pew @ 320 watts each = 3200 watts Running Cost: 3200 watts @ 16p kWh = £ 0.51 pence per Hour
Sunday Service	As you are able to only heat the pew in use heating costs are kept to an absolute minimum. 28 Pews seating 168 people 56 Heaters – 2 per Pew @ 320 watts each = 17,920 watts Running Cost: 17,920 watts @ 16p kWh = £ 2.87 per Hour

Installation

As with all our products, you also have options when it comes to installation.

Full Installation

If you wish for us to fully install your heating system we will only use our highly trusted electrical contractors who will discuss in depth with you the best options of installation.

Supply Only

We feel it only fair not to insist that we do the installation, after all you might have our own trusted contractor that works with you. We have no objection to you using your own installation team if you wish; we will always be available for technical assistance to your installers.

For further information, a free on site consultation or quotation please do not hesitate to contact us.
